Lab 3 - Building an automated data analysis pipeline

January 23, 2020

DSCI 522 - Lab 3

Recap: Project Course

Week 1

Proposal, EDA & project set-up

Week 3

Creating an automated pipeline

Remember to write tests!!!

Week 2

Finalizing 4 scripts & starting report

Week 4

Docker & project reproducibility

5 minutes

Feedback on Milestone 2

- Link to Release Tags

- Specific feedback coming in to you via issues shortly

- “When to Hardcode”

- **PLEASE** warn us if your files are big, or if your analysis takes 12 hours to run!!

- **EVERYONE** in the group must run the scripts before submission following README instructions

Milestone 3: What is due this week?

1. Update analysis method and report based on feedback from TAs, peers
2. Write a Makefile script
    - Have `all` target
    - Have `clean` target
    - Optionally have a `fast` target if your analysis takes a long time

Docker Check - Prep for Lecture 6

- Open a new terminal and type:

```
docker run hello-world
```

Feedback

- Make new groups of 3

- You will spend 7 minutes introducing your project and walking them through your code/report (timed)

- Then you will listen silently as you receive feedback from each person (3 min each).

- After the feedback session you will meet-up with your partner, discuss the feedback you each received, open issues and decide how you might move forward improving your project.

Group Interviews

Questions:

- What stage of the project are you on?
- Each member describes their most important contribution this week
- What is one thing that has worked really well for your team?
- Do you have any blockers/obstacles?
- How are you feeling about the project overall?
