Lab 4 - Docker and project reproducibility

February 5, 2020

DSCI 522 - Lab 4

Recap: Project Course

Week 1

Proposal, EDA & project set-up

Week 3

Creating an automated pipeline

Remember to write tests!!!

Week 2

Finalizing 4 scripts & starting report

Week 4

Docker & project reproducibility

5 minutes

Feedback on Milestone 3

- Gave everyone lots of feedback on visualizations, but overall EXCELLENT work!

- Did not have to tell a single group to add axis labels and titles! Happy to discuss specifics with you today…

- Feedback from TAs: Please explain the figures and tables you add into your report no matter how obvious **you** think it is!

Milestone 4: What is due this week?

1. Update analysis method, visualizations, and overall report based on feedback from TAs

2. Use makefile2graph (see Lecture 6)

3. Write your Dockerfile

Try and make sure everyone gets practice writing Dockerfiles, this is *the* essential skill from this milestone

Group Interviews

Questions:

- What stage of the project are you on?
- Each member describes their most important contribution this week
- What is one thing that has worked really well for your team?
- Do you have any blockers/obstacles?
- How are you feeling about the project overall?
